Abstract (Basic): WO 200534421 A2

NOVELTY - An encryption unit performs elliptic curve encryption on
plaintext and generates a **ciphertext** that includes x coordinate of
encryption point on elliptic curve. A decryption unit calculates y
coordinate of encryption point on elliptic curve using x coordinate
included in acquired **ciphertext** and performs elliptic curve
decryption using encryption point and other information in acquired
ciphertext to generate decrypted text.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
following:

- (1) plaintext encryption device;
- (2) **ciphertext** decryption device;
- (3) plaintext encryption method;
- (4) computer-readable medium storing plaintext encryption program;
- (5) **ciphertext** decryption method; and
- (6) computer-readable medium storing **ciphertext** decryption
program.

USE - For transfer of information such as video, music, **electronic**
mail in secrecy using elliptic curve discrete algorithm problem. Is
applicable for business transaction, patent application filing, and
payment in financial institution.

ADVANTAGE - Enables **ciphertext** to be reduced in length when
elliptic curve cryptography is used. Increases information security by
using cryptography technique.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
content delivery device.

Information item access control method using internet involves
decrypting hidden version of signed ciphertext received from customer,
so as to hide purchased information item from merchant

Patent Assignee: JAKOBSSON B M (JAKO-I); SCHNORR C P (SCHN-I)

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 20020069181	A1		9	G06F-017/60	

Abstract (Basic): US 20020069181 A1

NOVELTY - A hidden version of signed **ciphertext** and a request for purchase of given item, are received from the customer (106). The hidden version is decrypted and is returned to the customer, such that the **merchant** (102) is unable to identify the given item purchased by the customer.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

(1) Processor-based system for controlling access to information items; and

(2) Machine readable medium storing information items access control program.

USE - For controlling access to information items using **internet**.

ADVANTAGE - The **purchase** of **information** items from **merchant** using **internet** is implemented so as to ensure privacy of a customer. Also, the amount paid by the customer for particular information item is hidden from payment **server** and **merchant**.

DESCRIPTION OF DRAWING(S) - The figure shows the information retrieval system.

Merchant (102)

Customer (106)

US 6420852 B1 H02J-007/00

Abstract (Basic): EP 946018 A2

NOVELTY - The method involves setting N (greater than or equal to 2) prime numbers p_1, p_2, \dots, p_N as a first secret key, and a product $p_1 k_1 p_2 k_2 \dots p_N k_N$ as a first public key n, where k_1, k_2, \dots, k_N are arbitrary positive integers. Determining a second public key e and a second secret key d which satisfy: ed equivalent to 1 (mod L) where L is a least common multiple of $p_1-1, p_2-1, \dots, p_N-1$, using the first secret key. Obtaining a **ciphertext** C from a plaintext M according to C equivalent to $Me \pmod{n}$ using the first public key n and the second public key e.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for a decryption method, an authentication method, an encryption apparatus, a cipher communication system, an authentication message sender apparatus, an authentication message receiver apparatus, an authentication system, and a computer usable medium.

USE - For data concealment and communicating individual authentication in communications for digital TV, pay per view system of satellite broadcast, key distribution, **information** distribution, **electronic** mails, **electronic** transactions .

ADVANTAGE - Realizes encryption and decryption scheme with same security level as RSA cryptosystem on rational integer ring. Increased speed.

DESCRIPTION OF DRAWING(S) - The figure shows a block diagram of a cipher communication system according to one embodiment of the invention.

Treatment: Practical (P)

Abstract: The Web accessibility movement originated in the activities of people with disabilities and their advocates. Most specifically, **blind** people led the way to opening the benefits of the Internet to disabled citizens. In the United States, the effort to achieve this goal gained momentum when Section 508 of the Rehabilitation Act came into effect in 2001. Section 508 requires all federal government **purchases** of electronic and **information** technology products to meet accessibility standards. Today, the Internet is largely accessible to **blind** computer users, providing access to research materials, online shopping for nearly every imaginable product, a variety of entertainment options, career and professional sites, and other resources too. Accessibility guidelines offer a baseline for interoperability that goes beyond the needs of disabled people.

Treatment: Practical (P)

Abstract: With a widespread deployment of Internet and mobile communication skill, digital contents circulation has been in active. However, when people **purchase** multimedia **contents** such as multimedia books, online game, music, etc., by credit card, it has a problem that reveals card holder's private information. On the other hand, electronic cash provide user's anonymity and privacy, maintaining the value of paper money and its characteristics. In this paper, we propose an algorithm which uses the fair **blind** signature, supporting legitimate users' anonymity. It also has a function which can cancel the anonymity against double spending in electronic cash. (7 Refs)

Abstract: Loyalty program is a marketing effort by the merchant to keep customers loyal to their stores. It tries to keep track of the purchasing behavior of a customer by recording a customer's **purchase information**, including his credit card number, as a key identifier to the customer. While it may benefit the customer, the drawback is that the privacy of the customer is intruded upon. If the customer is using an anonymous payment system such as electronic cash/digital coins, his privacy is protected, but he will not get any benefit from the loyalty program which tries to record his payment information. The paper suggests several solutions to solve a merchant's need to gather statistical data from a customer's purchasing behavior versus a customer's need for privacy. Among the solutions, we present the idea of **blindly** signed pseudo digital certificates, which satisfies our requirement for a loyalty program scheme with an anonymous payment system. (29 Refs)

Influence of sensory and non-sensory attributes of Chardonnay wine on acceptance and purchase intent

Author: Yegge, Jane Marie

Degree: Ph.D.

Year: 2001

Corporate Source/Institution: University of California, Davis (0029)

Adviser: J. X. Guinard

Source: VOLUME 62/07-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 3006. 222 PAGES

Descriptors: AGRICULTURE, FOOD SCIENCE AND TECHNOLOGY

Descriptor Codes: 0359

ISBN: 0-493-30734-6

Twenty commercial Chardonnay wines were profiled by descriptive analysis. Of these, 10 wines that spanned the flavor space were selected. One hundred and twenty-six novice and experienced Chardonnay wine consumers rated acceptance and purchase intent for the 10 coded wines. After they were surveyed for demographic, knowledge, experience, consumption, and brand familiarity **information**, the consumers rated acceptance and **purchase** intent for the same 10 wines, which were identified and accompanied by the corresponding wine bottle. Finally, participants rated purchase intent for concepts presented on a computer screen as combinations of text or pictures depicting types of non-sensory attributes of these wines. From these data, consumer segments which had similar preferences for the wines were identified. The relative impact of sensory and packaging attributes varied with each segment. Only two of the four segments' purchase intent for the wines were significantly impacted by the wine bottle, label, and brand name. While all consumer segments were most likely to buy wines possessing low to moderate levels of oak aroma which varied in intensity in fruit and floral aromas, segments were influenced differently by specific packaging attributes. For each segment, wines rated highest in purchase intent during informed evaluations had the same packaging characteristics that concept testing showed to be most important for purchase decisions, indicating internal consumer consistency. For the two segments that were impacted the most by brand, those brands that were familiar and rated highest in importance during concept testing were also rated highest in purchase intent during informed evaluations of the wines. During concept testing, a third segment exhibited a tendency to buy wines possessing labels that described the wine as fruity. This group also rated fruity wines high in purchase intent during **blind** and informed evaluations. Also, concept testing revealed that a fourth group was attracted to low priced wines and labels describing oak aroma. These preferences were confirmed during informed product evaluations, as inexpensive, intense oak smelling wines were rated high in purchase intent.

Stoler **blindt** pV maten

NORWAY: NORWEGIANS LESS CRITICAL OF FOODS

Dagsavisen (ATF) 20 Feb 2001 p.online

Language: NORWEGIAN

Norwegians do not worry about the mad cow disease or gene manipulation when shopping their groceries, according to a survey conducted by the Nordic Council of Ministers. Only 5% of Norwegians look at the table of **contents** on the package when **buying** a product. 10% of consumers say they read the table of **contents** before **buying** the product whereas the corresponding figure in Denmark is 20%. In Sweden, 88% of consumers worry about what they eat and the same figure in Norway is 63%. Only 57% of Icelanders say they are concerned about what they eat. When asked whether they are afraid of the mad cow disease 36% of Swedes say yes whereas only 3% of Norwegians say yes. What is more, Norwegians do not care whether the products have been manufactured organically or ethically. In Denmark and Finland, consumers say it is important that the production is organic and that the living conditions of animals are good. Norwegians say it is important to have laws against additives and preservatives and reliable control routines. 86% of the interviewees in the whole of the Nordic region said they support this demand.

Filling the Pipeline by Opening the Checkbook

By John Carey in Washington, Amy Barrett in Philadelphia, and Ellen Licking in New York

Business Week, Number 3658, Pg 90

December 6, 1999

JOURNAL CODE: BW

SECTION HEADING: Science & Technology: PHARMACEUTICALS ISSN: 0007-7135

WORD COUNT: 732

TEXT:

... most of the upstarts aimed at becoming stand-alone pharmaceutical companies. Now, most hope to **sell information**, tools, or drug candidates instead. Bristol-Myers Squibb Co., for instance, has put together a...

... for diabetes, bipolar disorder, and macular degeneration, a common eye disease that can lead to **blindness**.

The hope is that these new alliances will feed Big Pharma's pipelines and boost...
